● Espacio (2024-2026)

Converged skills accumulated up to this point: branding, UX, UI, motion, coding, design systems — applied to brand, products, social media and events.

● Bueno (2021-2024)

My entry to the crypto world, creating small illustration systems, branding, UX and UI.

● BBVA (2019-2021)

I worked on the design system of the bank, collaborating with other countries like Spain, Colombia, Argentina and the United States. I also helped with the ATM redesign — providing design direction for its elements — it was one of the most representative projects I worked on at the bank.

● INE (Instituto Nacional Electoral) (2015-2018)

I worked as a UX/UI designer on the team that redesigned the main website, and afterward I led an internal design team for the national elections in Mexico in 2018.

● Design Studio (2013-2015)

My first introduction to professional design. I started doing branding and web design — this is where UX/UI began to gain momentum in my career.

● Universidad Insurgentes (2010-2013)

I studied Graphic Design in Mexico City.

My work lives between brand and product:

I develop solid visual systems and take them through UX, UI, motion and code — working in sync with every touchpoint of the product.

I started in 2013 at a design studio, then moved to the government sector in Mexico, after that to BBVA — supporting their design system in banking — and from there jumped into the blockchain world, surfing the fintech waves.

That journey taught me to move between rigid rules (banking, government) and uncharted territory (blockchain) — and to build brand systems that work on both extremes.

I don't limit myself to a single label: branding, UX, UI, motion and code are ingredients of the same process for me, not separate recipes.

Let's cook something together.
